Subject: RABC Review of RSS-248 Issue 2, DBS-06 Issue 1 and CPC-4-1-01 Issue 2

Dear Ms. Gallant,

In May 2022, the Department requested the RABC review 3 draft documents pertaining to the technical requirements for standard-power RLAN devices at a higher power for both indoor and outdoor use in the 6 GHz band. The draft documents sent to RABC were: RSS-248, Issue 2 – *Radio Local Area Network (RLAN) Devices in the 5925-7125 MHz band*; DBS-06, Issue 1 – *Automated Frequency Coordination (AFC) System Specifications for the 6 GHz (5925-6875 MHz) Frequency Band*; and CPC-4-1-01, Issue 2 – *Application Procedures for Dynamic Spectrum Access System Administrators (DSASAs)*. The Board assigned the review of the standard to its Fixed Wireless Communications Committee. At the request of the Department, RABC also posted the consultations on its website to facilitate comments from Canada's World Trade Organization (WTO) partners.

The EMC Committee held six calls to review the standard. Approximately 20 members participated. Attached to this letter are suggested revisions to the documents (the proposed changes are included in tracked changes).

In addition, RABC received 9 comments via the WTO portal on its website. These comments were forwarded to the Department for consideration.

The Board has now completed its review. We appreciate having had the opportunity to review the updated standard.

Sincerely,

J. David Farnes
General Manager
