Subject: Radio Standards Specification, RSS-193, draft issue 2, Flexible Use Broadband Equipment Operating in the Bands 24.25-28.35 GHz and 37.6-40.0 GHz

Dear Josette Gallant,

In July, the Department requested that RABC review a new draft issue of RSS-193, *Flexible Use Broadband Equipment Operating in the Bands 24.25-28.35 GHz and 37.6-40.0 GHz*. The Board assigned the review of the standard to the Advanced Wireless Services Subcommittee, a subcommittee of the Mobile and Personal Communications Committee. The Subcommittee held one meeting to review the standard.

During the meeting, member feedback was provided to the Department. Members generally agreed that the Department has accurately added to the standard the appropriate technical requirements for equipment operating in the 24.25-27.5 GHz and 37.6-40.0 GHz bands.

Also, at the request of the Department, RABC posted the draft standard on its website to facilitate comments from Canada's World Trade Organization (WTO) partners. We received comments from one stakeholder via our WTO portal. The comments were forwarded to the Department for consideration.

The Board has now completed its review. RABC recommends the standard be published as drafted. We appreciate having had the opportunity to conduct the review.

Sincerely,

J. David Farnes
General Manager
